Prototype

We can work with your design development team or develop the manufacturing strategy that meets your goals for your new or existing product.

Precision Dies & Stamping

Penn United has the comprehensive knowledge needed to produce the highest quality stamping dies, giving customers durability, and maintaining the highest degree of accuracy.

Precision Machining

Our machining group specializes in high precision machining for critical-application components.

American Carbide Tooling

We offer a large inventory of tungsten carbide catalog products and specialty items available to meet your requests.

Electro-Plating

Whether your application entails low or high volumes, our reel-to-reel plating lines are flexible and can accommodate many different components.

Carbide Manufacturing

Penn United Carbide offers a diverse portfolio of carbide grades specifically manufactured to provide optimum performance in critical service applications.

Product Assembly

Our Product Assembly Services are provided to our customers as a key element in the range of manufacturing capabilities we offer.

Automated Equipment

We offer automated in-line processes, turnkey precision assembly systems, automated inspection stations, flexible robotic work cells, and part handling solutions, which will meet and exceed your manufacturing project needs.

Precision Spindles and Grinders

Parker Majestic, a division of Penn United, provides innovative grinding machines for the machine tool and manufacturing industries.

Advanced Manufacturing Training

Our learning center's main mission is to assess, design and develop manufacturing training programs to meet the needs of our customers and employees.

Hand Tools

PennTek Tools was established to develop and manufacture innovative tools, accessories and solutions for the hand tool industry.
