Greetings!

We are increasing our services to include prototype and production reel-to-reel over molding. This capability adds to our diverse list of manufacturing solutions including metal stamping, reel-to-reel plating, precision tooling design and build, engineered carbide components and assemblies, precision machining and Parker Majestic grinders.

Penn United has formed a strategic alliance with X-Cell Tool and Mold of Erie, PA. Penn United will partner with X-Cell to offer over molding services to complement our core technologies of progressive tooling, high speed continuous stamping and reel-to-reel plating. The strategic alliance will focus on Penn United's interconnect customers in a wide range of markets including electronics, telecommunications, automotive, medical, defense and aerospace.

"We have seen a resurgence in our overall interconnect market share and are looking to offer our customers complete manufacturing solutions while building off our core technologies," said Jeff Scales, General Sales Manager for Penn United Technologies, Inc. "We will now be able to offer a full range of services for our connector customers with the capability to design and build tooling, run production stamping, add precious metal plating and over mold their complete packages."

Please stop and visit us at the TE Connectivity Supplier Technology Trade Show, June 1st, 8:00am - 4:00pm at the Sheraton Harrisburg-Hershey Hotel. Penn United will be displaying our products and will be on site to discuss how we can help you fulfill your manufacturing needs.
